

This ultra-light mast, with very short deployment time, is particularly appreciated by Airborne units.

It is designed to support a light wire antenna or a very light omnidirectional antenna, which makes instant radio connections possible in any area.

The lifting system is identical to the very popular LERC fishing rods : all tubes (conical) are stored in the bigger one. They are extracted from bigger tube bottom and sleeved one into the others.

TECHNICAL SPECIFICATIONS

Height	9 m
Tip Diameter	22.5 mm
Maximum Headload	0.7 kg
Maximum Windload	80 km/h
Total Weight	3 kg
Mast Section Weight	1.9 kg
Temperature Range	-40°C to +70°C
Guys	3 Way
Colour	Green, Army IR-NATO
Packaging	1 bag
Packed Length	1.2 m
Setup Time (typical)	5 mins

All tubes are stored into each other

Transport bag

Contents of small pocket :

- 3 stakes
- 3 guy cables
- 1 guy collar
